

Set Up DNN

Overview

DNN offers three products:

- DNN Platform is the free open-source package.
- Evoq Content adds more advanced website management features over the DNN Platform.
- Evoq Engage adds user engagement features over Evoq Content.

You can [compare the features](#) in detail.

Requirements

- [DNN 8.0 Requirements](#)
- (Optional) **Developers:** Visual Studio 2015 is the recommended IDE for developing DNN modules.

Steps

1. [Download DNN and set up folder permissions for the user account that will run your website.](#)
2. [Enable and set up IIS.](#)
3. [Install and set up SQL.](#)
4. [Run the DNN Installation Wizard.](#)
