

The DNN Platform

The **DNN Platform** is an open, extensible, secure, and scalable content management system for ASP.NET. Hundreds of thousands of businesses around the world, [from small local businesses to Global 1000 companies](#), depend on the DNN Platform as their website authoring environment.

This site is organized according to role:

- **Administrators** could be *hosts (super users)* who manage the web servers or *website admins* who manage the individual websites.
- **Developers** create modules that extend the functionality of the DNN Platform.
- **Designer** create themes that customize the look of a website.

Administrator
